PINK FLOWERED LOCUST

(Robinia decaisneana Idahoensis)

Here's a new hybrid Pink Flowered Locust---a beautiful new tree for Street planting---an attractive Shade Tree---and a Beauty for the Home Grounds and Landscape.

Where a quick-growing, drought-resistant tree of great beauty is desired---plant Pink Flowered Locust.

It is equally hardy and rapid in growth as the common Black Locust. It resembles the Black Locust in its ability to withstand hard knocks and in general form, shape and habit. But it is much more colorful---with long racemes of fragrant flowers---beautiful dark pink.

Its feathery masses of light green foliage borne on spreading branches provide cool shade---making it an exceptionally fine tree for the yard or home grounds.

Pink Flowering Locust produces a mass of pink flowers covering the whole tree in spring and early summer---with recurrent scattering blossoms throughout the summer.

It has no seed pods---therefore is very desirable as a lawn tree.

Pink Flowering Locust is hardy, a rapid, upright spreading tree---will bloom quickly, and is one of the most colorful trees we have ever grown in our nursery.

For spring planting we will deliver choice trees of Pink Flowering Locust.

Order Early---this is a new and rare variety---our supply is limited.

<u>Size</u>	<u>Each</u>	<u>Dozen</u>
5 to 6 foot whips . .	1.25	12.50
6 to 8 foot	1.75	17.50
8 to 10 foot	2.25	22.50
